

Rebecca Looney is from Southern Illinois and currently lives in Indianapolis, IN with her husband, Doug, and three sons, Owen, Evan and Greyson. She graduated from Southern Illinois University-Carbondale with a Bachelor of Science-Radiologic Sciences degree in 2007. Rebecca holds an ARRT certification since 2007 and ARDMS certifications in Abdomen (AB) 2008 and OB/GYN 2010. All certifications are current and in good standing with the accrediting associations. In addition, Rebecca is a member of the American Institute of Ultrasound in Medicine (AIUM).

Upon graduation and completion of her clinical hours at Condell Medical Center in Libertyville (IL), Rebecca has compiled experience in hospital, MFM, outpatient and private practice settings that have rounded out her experience and proficiency with many different procedures. Most recently, Rebecca worked in a private OB/GYN practice where she not only fine-tuned her skills but saw a need for specialized ultrasound care within medical practices as well as direct to the patients.

In November of 2014, Rebecca started Lifetime Imaging, LLC so she could provide best in class ultrasound care to women, and men, at an affordable price. Lifetime Imaging's services are mobile where we can setup in your offices and we also have our own location on the Southside of Indianapolis. Lifetime Imaging currently provides non-diagnostic 3D/4D ultrasounds as well as various Abdomen, OB/GYN and other related diagnostic ultrasounds on behalf of and within a variety of medical locations around the City.

Please feel free to contact us directly if you have questions or would like to learn more about how Lifetime Imaging can help you provide best in class ultrasound services.

Respectfully,

Lifetime Imaging
